

**DEPARTMENT OF THE ARMY
U.S. Army Corps of Engineers
Washington, DC 20314-1000**

EM 1110-2-1416

CECW-EH-Y

Manual
No. 1110-2-1416

15 October 1993

**Engineering and Design
RIVER HYDRAULICS**

Table of Contents

Subject	Paragraph	Page	Subject	Paragraph	Page
Chapter 1			Chapter 4		
Introduction			Multidimensional Flow Analysis		
Purpose	1-1	1-1	Introduction	4-1	4-1
Scope	1-2	1-1	Limitations of One-Dimensional		
Applicability	1-3	1-1	Analysis	4-2	4-1
References	1-4	1-1	Equations of Flow	4-3	4-1
Needs for River Hydraulic Studies	1-5	1-1	Significance of Terms	4-4	4-2
General Methods	1-6	1-1	Use of Equations of Flow	4-5	4-2
Organization	1-7	1-2	Two-Dimensional Flow Conditions ..	4-6	4-3
			Available Computer Programs	4-7	4-4
			Data Requirements	4-8	4-5
Chapter 2			Data Development and Model		
Introduction to River Hydraulics			Calibration	4-9	4-6
Introduction	2-1	2-1	Example Applications	4-10	4-7
Flow Dimensionality Considerations ...	2-2	2-1			
Water Waves	2-3	2-2	Chapter 5		
Flow Classification	2-4	2-4	Unsteady Flow		
Regimes of Flow	2-5	2-7	Introduction	5-1	5-1
Types of Flow	2-6	2-7			
Classification of Flow Profiles	2-7	2-9	<i>Section I</i>		
Basic Principles of River Hydraulics ..	2-8	2-9	<i>Introduction</i>		
			Steady Versus Unsteady Flow Models	5-2	5-1
Chapter 3			Conditions that Require Unsteady		
Formulating Hydraulic Studies			Flow Analysis	5-3	5-2
Initial Considerations	3-1	3-1	Geometry	5-4	5-3
Overview of Techniques for Conducting			Controls	5-5	5-5
River Hydraulics Studies	3-2	3-1	Boundary Conditions	5-6	5-5
Analysis of Hydraulic Components ...	3-3	3-4	Steps to Follow in Modeling a		
Data Requirements	3-4	3-4	River System	5-7	5-9
Calibration of Hydraulic Analysis			Accuracy of Observed Data	5-8	5-11
Models	3-5	3-11	Calibration and Verification	5-9	5-16
Guidelines for Analytical Model			Example Applications of Unsteady		
Selection	3-6	3-13	Flow Models	5-10	5-17

Subject	Paragraph	Page
<i>Section II</i>		
<i>Theory of Routing Models</i>		
Introduction	5-11	5-17
Unsteady Flow Model	5-12	5-23
Diffusion Model	5-13	5-28
Kinematic Wave Model	5-14	5-29
Accuracy of Approximate Hydraulic Models	5-15	5-29
Muskingum-Cunge Model	5-16	5-30
Hydrologic Routing Schemes	5-17	5-30

Chapter 6

Steady Flow - Water Surface Profiles

<i>Section I</i>		
<i>Introduction</i>		
Scope	6-1	6-1
Assumptions of the Method	6-2	6-1
Standard-step Solution	6-3	6-1
Range of Applicability	6-4	6-2
Example of Steady Flow Water Surface Profile Study	6-5	6-3
<i>Section II</i>		
<i>Data Requirements</i>		
Introduction to Data Requirements	6-6	6-4
Flow Regime	6-7	6-5
Starting Conditions	6-8	6-5
<i>Section III</i>		
<i>Model Development</i>		
Data Sources	6-9	6-5
Data and Profile Accuracy	6-10	6-6
Model Calibration and Verification	6-11	6-7
<i>Section IV</i>		
<i>Special Problems</i>		
Introduction to Special Problems	6-12	6-13
Bridge Hydraulics	6-13	6-13
Culvert Hydraulics	6-14	6-16
Limits of Effective Flow	6-15	6-18
Channel Controls	6-16	6-19
River Confluences	6-17	6-19
Changing Flow Regime	6-18	6-19
Ice-covered Streams	6-19	6-23

Subject	Paragraph	Page
Chapter 7		
Water Surface Profiles with Movable Boundaries		
<i>Section I</i>		
<i>Introduction</i>		
Similarities and Differences Between Fixed and Mobile Bed Computations	7-1	7-1
<i>Section II</i>		
<i>Theoretical Basis</i>		
Sediment Transport Functions	7-2	7-1
<i>Section III</i>		
<i>Data Requirements</i>		
General Data Requirements	7-3	7-4
Geometric Data	7-4	7-5
Bed Sediment Data	7-5	7-7
Boundary Conditions Data	7-6	7-7
Data Sources	7-7	7-11
Data and Profile Accuracy	7-8	7-14
<i>Section IV</i>		
<i>Model Confirmation and Utilization</i>		
Model Performance	7-9	7-14
Development of Base Test and Analysis of Alternatives	7-10	7-18
<i>Section V</i>		
<i>Computer Programs</i>		
Introduction	7-11	7-19
Scour and Deposition in Rivers and Reservoirs (HEC-6)	7-12	7-19
Open Channel Flow and Sedimentation (TABS-2)	7-13	7-20

Appendix A

Appendix B

Glossary

Subject	Paragraph	Page
Appendix C		
Study Planning and Reporting		
Development of the Hydraulic Study		
Work Plan	C-1	C-1
Reporting Requirements	C-2	C-2
Hydrologic Engineering Study		
Checklist	C-3	C-4
Documentation Checklist	C-4	C-4
Example Detailed Hydrologic Engineering		
Management Plan for a Feasibility		
Study (Flood Damage Reduction		
using HEC-1 and -2)	C-5	C-4
Generic Hydraulic Study Work Plan for		
Unsteady, Gradually-Varied Flow		
Analysis (TABS-2)	C-6	C-9
 Appendix D		
River Modeling - Lessons Learned		
 <i>Section I</i>		
<i>Defining River Geometry</i>		
Introduction	D-1	D-1
Geometric Data	D-2	D-1

Subject	Paragraph	Page
Developing Cross-Sectional Data		
to Define Flow Geometry	D-3	D-3
Developing Cross-Sectional Data		
to Satisfy Requirements of the		
Analytical Method	D-4	D-6
Reviewing Computed Results to Determine		
Adequacy of Cross-Sectional Data . .	D-5	D-7
Other Considerations in Developing		
Cross-Sectional Data	D-6	D-7
Modeling Flow Geometry at Structures	D-7	D-7
Developing Reach Length Data	D-8	D-12
Survey Methods for Obtaining Cross		
Sections and Reach Lengths	D-9	D-14
 <i>Section II</i>		
<i>Energy Loss Coefficients</i>		
Variation of Manning's n with		
River Conditions	D-10	D-15
Estimation of n Values	D-11	D-17
Contraction and Expansion Losses . . .	D-12	D-22
